### ABILITIES

**CORE**

Deep Strike, Smoke, Fly

**POWER FIELD SYNCHRONISER**

An auxiliary atomantic shielding generator wreathes the Dreadnought in a cascading energy field. This model has a 5+ invulnerable save.

**JUMP PACK ASSAULT**

During the Movement phase, this model can FLY, ignoring all terrain and other models when it moves. In addition, during deployment you can set up this model in Reserves; if you do, in the Reinforcements step of one of your Movement phases you can set it up anywhere on the battlefield that is more than 9" horizontally away from all enemy models.

**IMPLACABLE ADVANCE**

This model automatically passes Battle-shock tests.

**EXPLODES (5+)**

When this model is destroyed, roll one D6 before removing it from play; on a 5+ each unit within 6" suffers D3 mortal wounds.

**BULKY (6)**

This model counts as 6 models for the purposes of any Transport capacity.

**DESIGNER'S NOTE**

**Homebrew — 1st Ed (Rogue Trader, 1987) lineage.** The Contemptor-class Close Assault Dreadnought traces back to the original *Rogue Trader* Space Marine Dreadnought — a walker chassis that could mount four heavy weapons in independently-targeted arm hardpoints. That multi-weapon configurability survived only sporadically through later editions

before modern Dreadnoughts settled into the 1-2 main weapon pattern. "Chuck" reimagines that 1st Ed multi-arm Dreadnought as a 10e Contemptor: four synchronised bolt-guns paired in the upper limbs, paired Gravis power fists in the lower limbs, and a "Power Field Synchroniser" (the standard atomantic shielding re-fluffed to tie the bolters' volley together). Built atop a 10e Brutalis/Redemptor-equivalent statline; the chassis itself is canon, but this specific weapon arrangement is homebrew. **11e codex update (18 Oct 2026):** statline unchanged; Astartes bolt weapons S5 AP-1 (pistols [CLOSE-QUARTERS]) and codex-named weapons on the codex profile; points scaled with Dreadnought [Legends] 135→135.
