> **Designer's Note.** Built from the real HH3e digitized "Dreadwing Interemptor Squad" profile (`Dark Angels.json`, filed as Support) — the Dark Angels' own name for their outcast Destroyer-pattern squad, sanctioned to carry rad and forbidden ordnance. Real stat line: Praefectus (Sergeant) and Interemptor both M7/WS4/BS4/S4/T4/W1/I4/A1, SAV3+, no invulnerable save, LD9/LD8 respectively — translated to 11e as M7"/T4/Sv3+/W1/LD8+/OC1, the same thin-Battleline chassis established for the Death Guard's Mortus Poisoner Squad. Priced at 110/220 for 5/10, above Mortus Poisoner Squad's 70/140 to reflect the plasma-weapon-armed default loadout (real 45pts unit base + 20pts/model). The real Destroyer Missile Launcher option (rad and stasis missiles, 1-in-5 models) is translated as a Toughness-reduction weapon rather than the exact real Poisoned/stasis mechanics, since the real weapon's own profile wasn't resolvable in the local data — kept thematically faithful (rad ordnance lowers Toughness) rather than guessing exact numbers. Plasma Burner's own real profile was also unresolvable; given reasonable, proportionate stats matching its Template/plasma nature rather than invented at random. Bitter Duty and The Angels of Death are both real, shared rules (Bitter Duty previously seen on the Death Guard's Mortus Poisoner Squad). **11e codex update (18 Oct 2026):** power armour T5 like the codex Intercessors and the Chaos Legionaries; Astartes bolt weapons S5 AP-1 (pistols [CLOSE-QUARTERS]) and codex-named weapons on the codex profile; points scaled with Intercessor Squad 80→85.
