LEGIONES ASTARTES • IRON WARRIORS • TRAITOR

The Iron Havocs don't move if they don't have to — a dug-in weapons team that never breaks cover is a weapons team the enemy can't ever quite pin down.

Designer's Note. Built from the real HH3e digitized "Iron Havocs" profile (`Iron Warriors.json`) — this Legion's dedicated heavy weapons fire-support squad. Real stat line: Iron Havoc M7/WS4/BS4/S4/T4/W1/A1/LD7/SAV3+ (no invulnerable save), Iron Havoc Sergeant the same but LD8, 35pts unit fee + 25pts/model (HH3e economy), 4-9 models plus the mandatory Sergeant (5-10 total). Priced at 115/260pts for 5/10. Ferrum Occularis is a real, distinctively-named rule — ignores Cover Saves against a stationary shooting attack, translated directly to ignoring the Benefit of Cover under the same stationary condition. Support Unit(1) is a real Victory-Point/army-composition rule left unbuilt, consistent with how this rule family has been handled across every Legion's roster. The real profile's weapon-swap options (a longer heavy weapon list) were trimmed to a single Autocannon loadout for card-space reasons, matching this project's standard simplification for multi-option squads. **11e codex update (18 Oct 2026):** power armour T5 like the codex Intercessors and the Chaos Legionaries; Astartes bolt weapons S5 AP-1 (pistols [CLOSE-QUARTERS]) and codex-named weapons on the codex profile; points scaled with Intercessor Squad 80→85.
