THE ORDER'S TERMINATOR RETINUE

LEGIONES ASTARTES • DARK ANGELS • LOYALIST

Lighter than the Cataphractii pattern, faster to close, and no less certain of the outcome — the Tartaros retinue trades a fraction of its plate for the speed to actually reach the fight.

Implacable Advance
This unit cannot be selected to make a Fall Back move, and ignores modifiers to its Movement characteristic.

Companions
Each time a friendly Dark Angels Character model is leading this unit, ranged attacks made against this unit cannot use the [PRECISION] ability to target that Character model.

UNIT COMPOSITION

5 models: 1 Tartaros Oathbearer (Sergeant) and 4 Tartaros Companions, in Tartaros Terminator armour. All models are equipped with a Combi-Bolter and a Calibanite Warblade. Up to 1 model can replace its Combi-Bolter and Calibanite Warblade with paired Lightning Claws. The Oathbearer can replace its Calibanite Warblade with a Terranic Greatsword.

> **Designer's Note.** Built from the real HH3e digitized "Tartaros Terminator Deathwing Companions" profile (`Dark Angels.json`) — the sibling unit to the Cataphractii Deathwing Companions, same real 240pts cost but a genuine stat trade: real M7 (vs Cataphractii's M6) and INV5+ (vs Cataphractii's INV4+), the classic Tartaros speed-for-durability tradeoff from HH lore, preserved here as M6" (vs Cataphractii's M5") and INV5+ (vs Cataphractii's 4+). Everything else — weapons, Companions, Implacable Advance, the fixed 5-model squad size — is identical to the

> Cataphractii card, matching how close the two real profiles are to each other. **11e codex update (18 Oct 2026):** toughness +1 (Terminator armour T6, bikes T6 like codex Outriders); Astartes bolt weapons S5 AP-1 (pistols [CLOSE-QUARTERS]) and codex-named weapons on the codex profile; points scaled with Terminator Squad 160→190.
