Designer's Note. Built directly from the real HH3e digitized "Ætos Dios" profile (`Imperial Fists.json`) — a second real named Lord of War found this session, matching Iron Warriors' "The Tormentor" precedent, and coincidentally an exact real-cost tie with it: 700pts (HH3e economy), the highest real point cost of any non-Primarch unit checked in this project. Real stat line: M18/BS4/Front13/Side13/Rear13/HP18, Type Vehicle (Unique, Transport, Super-heavy, Flyer), Transport Capacity 32 — a genuine named Thunderhawk-Gunship-type super-heavy transport, translated to 550pts using the same real-cost-tie logic already established for The Tormentor. All four weapon systems are real and canonically loaded: Turbo-laser destructor (real Blast(3"), Armourbane, translated to Anti-

vehicle 3+), twin heavy bolter (mounted twice, sponson and turret), lascannon (mounted twice, hull), and six Hellstrike missiles (real Limited(1) each, translated to [ONE SHOT]). Real "Thunderhawk Transport Bay" (non-Infantry models may embark, up to 2, with a Bulky-based capacity cost) is translated directly as a non-Infantry embark allowance. Real "Ætos Praetoria" (can only be fielded alongside Rogal Dorn, who must start the battle embarked aboard it) is translated directly and is this unit's defining restriction — like The Tormentor, it is excluded from the Legion Combat Patrol on cost grounds alone, and additionally can never appear in a roster without Rogal Dorn himself. **11e codex update (18 Oct 2026):** statline unchanged; Astartes bolt weapons S5 AP-1 (pistols [CLOSE-QUARTERS]) and codex-named weapons on the codex profile; points scaled with Thunderhawk Gunship 840→850.
