

DREADCLAW DROP POD

DREADNOUGHT-CAPABLE DROP POD

ADEPTUS ASTARTES — LEGIONES ASTARTES (HORUS HERESY)

A Dreadnought-capable drop pod with the unusual property of being able to fly back into orbit — or re-position on the table — after landing. Traitor Legions favour it as a daemon-tainted variant.

ABILITIES

Storm Bolter

[RAPID FIRE 2]

Magna-Melta Blast

[TORRENT] [MELTA 2] — auto-hits, which is why it has no BS characteristic.

Core

[DEADLY DEMISE D3] [DEEP STRIKE] [FLY]

Transport

This model has a transport capacity of 10 Legiones Astartes models, or 1 Castra Ferrum Dreadnought, Saturnine Dreadnought, or Contemptor Dreadnought (11e Legends). Cataphractii and Tartaros Terminators count as 2 models each.

Drop Pod Assault

This model must start the battle in Strategic Reserves. It arrives via Deep Strike anywhere on the battlefield more than 9" from enemy models. Embarked units can disembark within 3" of this model and are eligible to declare a charge.

Post-Landing Mobility

Unlike a standard Drop Pod, this model can move after landing — in subsequent Movement phases it can re-position with M12" (Fly). In a turn it moves, units cannot embark or disembark from it.

Chaos-Tainted (Traitor-only optional)

If fielded by a Traitor Legion, this model can be given the Daemonic keyword; if so, you can re-roll one Hit roll and one Wound roll per phase for this model's attacks. Declared at army construction.

UNIT COMPOSITION

1 Dreadclaw Drop Pod model. This model is equipped with: 1 Storm Bolter; 1 Magna-Melta Blast.

Designer's Note. Dreadclaw is a Dreadnought-capable drop pod with the unusual property of being able to fly back into orbit (or re-position on the table) after landing. Traitor Legions use it as a daemon-tainted variant. HB: T9/Sv3+/W8 (lighter than Kharybdis), Deep Strike, Fly, Transport 10 or 1 Dreadnought, post-landing Fly mobility, a once-per-battle magna-melta blast on landing, and an optional Daemonic upgrade for Traitor Legions. 95 pts — the only HH transport that can deliver a Dreadnought from orbit. **11th-edition verification, 2026-08-30:** confirmed still current in fresh HH3e BSData ('Legiones Astartes.json', non-hidden, typed "Vehicle (Flyer, Transport)"). Real profile uses the older Vehicle armour-facing format (Front12/Side12/Rear12/HP5) rather than T/W/SV — no direct comparison possible, kept as-is (format conversion only). Also fixed a real bug on the original card: the Magna-Melta Blast is tagged [Torrent] (auto-hits) but was listed with a BS 4+ value — corrected to blank/N/A per the

standing Torrent-weapon convention. Real Transport Capacity is 12 vs this card's stated 10, kept as-is (intentional slot-cost design, same reasoning as sibling transports).
