This model has a transport capacity of 20 Legiones Astartes models. Cataphractii and Tartaros Terminators count as 2 models each. Saturnine Terminators count as 3 models each. This model cannot transport Dreadnoughts.

Drop Pod Assault

This model must start the battle in Strategic Reserves. It arrives via Deep Strike anywhere on the battlefield more than 9" from enemy models. After it arrives, embarked units immediately disembark within 3" of this model and are eligible to declare a charge.

Storm Cannon Volley

When this model arrives from Reserves, it can immediately fire all of its weapons at full BS — this counts as its shooting for that turn.

Immobile (post-landing)

After landing, this model cannot move. It can still be targeted and destroyed.

Designer's Note. Kharybdis is the Heresy's heavy assault drop pod — larger than a standard Drop Pod (20-model capacity vs 10) and equipped with a storm cannon turret for landing-zone suppressive fire. No direct 10e/11e analog. HB: T11/Sv3+/W12, Deep Strike, Transport 20, Storm Cannon Volley (full-BS shooting on the turn of arrival), and Immobile post-landing. 195 pts — pairs naturally with the Master of Descent (no-scatter) and a Praetor with a Cataphractii Chosen retinue for the iconic Heresy alpha-strike package. **11th-edition verification, 2026-08-30:** confirmed still current in fresh HH3e BSDData (`Legiones Astartes.json`, non-hidden, typed "Vehicle (Flyer, Transport)"). Real profile uses the older Vehicle armour-facing format (Front12/Side12/Rear12/HP8) rather than T/W/SV — no direct comparison possible, kept as-is (format conversion only). Real Transport Capacity is 22 vs this card's 20, kept as-is per the established Triaros/Caestus precedent (intentional slot-cost design, not a literal capacity translation).
