Designer's Note. Sabre is the Heresy's light Predator-chassis strike tank — fast (M12"), Advance-and-Shoot, with a turret loadout (quad lascannons default, neutron blaster or volkite culverin variants). The role canonical 10e/11e covers with Razorback or Whirlwind, but neither has the Sabre's specific quad-lascannon-array niche. HB: T9/Sv3+/W10 plus Lethal Hits when stationary or Sustained Hits 1 when moving (a mobility-fire trade-off), and Advance-and-Shoot. 145 pts. **11th-edition verification, 2026-08-30:** confirmed still current in fresh HH3e BSData under the real name "Sabre" ('Legiones Astartes.json', non-hidden, typed "Vehicle (Rapid)"). Real profile uses the older Vehicle armour-facing format (Front12/Side11/Rear10/HP4) rather than T/W/SV — no direct comparison possible, kept as-is (format conversion only).
