

MECHANICUM TARANTULA BATTERY

STATIC SENTRY GUN EMPLACEMENT SQUADRON
MECHANICUM (HORUS HERESY)

Static gun emplacements bristling with auto-targeting auspices — the Mechanicum's pillbox-tier defensive option, immobile but relentlessly accurate.

M	T	SV	W	LD	OC
0"	6	4+	3	8+	0

RANGED WEAPONS

WEAPON	RANGE	A	BS	S	AP	D
Twin Lascannon	48"	2	3+	12	-3	D6+1

MELEE WEAPONS

WEAPON	RANGE	A	WS	S	AP	D
Sentry Gun Chassis	Melee	1	6+	3	0	1

ABILITIES

Twin Lascannon

[TWIN-LINKED]

Iron Discipline

This unit automatically passes Battle-shock tests.

Sentry Programming

This unit cannot move, Advance, Fall Back, or charge. If forced to make a Pile-In or Consolidation move, the model does not move.

Auto-Targeting Auspex

Each time a model in this unit makes a ranged attack, it has +1 to the Hit roll. This model is treated as Battle-Ready for Cover purposes (always benefits from Cover, even when no terrain is present).

Wargear Variants

Each Tarantula can replace its twin lascannon with one of the following: twin heavy bolter (36" A6 BS3+ S5 AP-1 D2 [Twin-linked, Sustained Hits 1]) or twin multi-melta (18" A2 BS3+ S9 AP-4 D D6+2 [Twin-linked, Melta 2]).

UNIT COMPOSITION

3 Mechanicum Tarantula Battery models. Each Tarantula is a separate sentry gun. Each model is equipped with: 1 Twin Lascannon; 1 Sentry Gun Chassis.

Keywords: VEHICLE, STATIC, TARANTULA

Faction Keywords: MECHANICUM (HORUS HERESY)

Designer's Note. HH3e Mechanicum Tarantula Battery. Static gun emplacements — the Mechanicum's pillbox-tier defensive option. M0" and Sentry Programming make them immobile. Anchored on Tarantula sentry-gun tier (basically tarantula HH stats brought to 10e/11e). **11th-edition verification, 2026-08-30:** confirmed still current in fresh HH3e BSData (`Mechanicum.json`, non-hidden). Real profile uses the older Vehicle armour-facing format (Front/Side/Rear Armour + HP, M "-") rather than the d10 M/WS/BS/S/T/W system — no direct comparison is possible with this card's T/W/SV, so content kept as-is (format conversion only); the real M "-" does confirm this card's M0"/Sentry Programming immobility is correct.
